

Listening Test

In the Listening test, you will be asked to demonstrate how well you understand spoken English. The entire Listening test will last approximately 45 minutes. There are four parts, and directions are given for each part. You must mark your answers on the separate answer sheet. Do not write your answers in your test book.

Part 1

Directions: For each question in this part, you will hear four statements about a picture in your test book. When you hear the statements, you must select the one statement that best describes what you see in the picture. Then, find the number of the question on your answer sheet and mark your answer. The statements will not be printed in your test book and will be spoken only one time.

Look at the example item below.

Now listen to the four statements.

Sample Answer

(A) (B) ● (D)

Statement (C), "They're standing near the table," is the best description of the picture, so you should select answer (C) and mark it on your answer sheet.

Questions 193 ~ 196 refer to the following information.

Salt

The government watchdog, The Food Standards Agency, has announced targets for reducing salt in a range of food products.

The move is designed to cut average daily salt intake in the diet, as too much salt is linked to high blood pressure, which can increase the risk of heart attacks and strokes.

What should we do?

Dr. Wynnie Chan, a nutrition scientist for the British Nutrition Foundation, says that everybody should look to reduce the amount of salt in their diet.

"It would have a significant effect on those people who need to reduce their salt levels because they are susceptible to hypertension, but it would also do no harm for the whole population to reduce its salt intake," she said.

Dr. Chan said there were four main ways to reduce salt intake:

- * Stop adding table salt to food once it is served
- * Choose items with a reduced sodium content
- * Carefully monitor the salt content of processed food
- * Eat more fruit and vegetables - they contain potassium which balances the effect of salt on the body

Reading food labels can be confusing as they often give the sodium, rather than the salt content of food. To calculate the amount of salt in a product, multiply the sodium content by two and a half times.

193. What is the target of the Food Standards Agency's announcement?
- (A) Reducing fat in your diet
 - (B) Increasing protein in your diet
 - (C) Increasing sodium content in your diet
 - (D) Reducing salt in your diet
194. Why did the Food Standards Agency design this plan?
- (A) To reduce the risk of high blood pressure
 - (B) To reduce the risk of cancer
 - (C) To reduce the risk of birth defects
 - (D) To reduce the risk of food poisoning
195. Who is Dr. Wynnie Chan?
- (A) A researcher for the Food Standards Agency
 - (B) A nutrition scientist for the British Nutrition Foundation
 - (C) A cancer specialist at the British Cancer Foundation
 - (D) A government official for the Food Standards Agency
196. What should people do to calculate the amount of salt in a product?
- (A) To multiply the sodium content by one and a half times
 - (B) To multiply the sodium content by two and a half times
 - (C) To multiply the sodium content by three and a half times
 - (D) To multiply the sodium content by four and a half times

Questions 197 ~ 200 refer to the following articles.

Smoking is a greater cause of death and disability than any single disease, says the World Health Organization.

According to their figures, it is responsible for approximately five million deaths worldwide every year.

Tobacco smoking is a known or probable cause of approximately 25 diseases, and even the WHO says that its impact on world health is not fully assessed.

Heart Attack and Stroke

UK studies show that smokers in their 40s and 50s are five times more likely to have a heart attack than non-smokers.

Tobacco contributes to the hardening of the arteries, which can then become blocked and starve the heart of blood flow, causing the attack.

Often, smokers who develop this will require complex and risky heart bypass surgery.

If you smoke for a lifetime, there is a 50% chance that your eventual death will be smoking-related—half of all these deaths will be in middle age.

Smoking also increases the risk of having a stroke.

197. According to this report, what does the World Health Organization say?
- (A) Smoking is the greatest cause of death worldwide every year.
 - (B) Smoking is the second greatest cause of death worldwide every year.
 - (C) Smoking is responsible for three million deaths worldwide every year.
 - (D) Smoking is responsible for more than half of all deaths to middle-aged people.
198. How many diseases is tobacco smoking responsible for?
- (A) 25
 - (B) 30
 - (C) 45
 - (D) 50
199. According to the article, how does tobacco smoking contribute to a heart attack?
- (A) It makes people less likely to exercise.
 - (B) It hardens arteries and blocks the blood flow.
 - (C) It increases the rate of alcohol consumption.
 - (D) It poisons the lungs and blocks oxygen intake.
200. Which country's studies showed that middle-aged smokers have more heart attacks than non-smokers?
- (A) UK
 - (B) USA
 - (C) UAE
 - (D) USSR
